

Dante Solórzano Ferrer

d.solorzanoferrer@ugto.mx | LinkedIn | GitHub

Professional Summary

Final-semester Information Systems undergraduate with proven experience in full-stack software development, RESTful API design, and relational database management. Specialized in engineering scalable systems applying Clean Architecture principles and MVC patterns, integrating modern reactive interfaces in React/TypeScript with high-performance backend services in ASP.NET Core and C#. Demonstrated expertise in process automation, serverless deployments, and agile collaboration under pressure. Fluent in technical and conversational English (C1).

Education

Universidad de Guanajuato

Bachelor of Sciences in Information System

Expected Graduation: December 2026

GPA: 3.4

Professional Experience

Software Developer Intern

April 2026 – Present | Guanajuato, Mexico

Secretaría de Finanzas del Estado de Guanajuato

Technologies: C#, ASP.NET Core, SQL Server, Entity Framework Core, Dapper, Git/GitHub

- Architected and maintained backend services and RESTful APIs in C# using ASP.NET Core under Clean Architecture, supporting the migration of legacy SAP platforms (SAP NetWeaver Portal).
- Optimized complex T-SQL stored procedures with dynamic query execution and JSON parsing for granular role-based access control and user permission management.
- Implemented high-performance data access layers leveraging Entity Framework Core and Dapper across enterprise SQL Server and MySQL databases.
- Collaborated on requirement gathering and technical testing matrices, authoring comprehensive documentation for endpoints, data schemas, and business rules to guarantee pre-production stability.

Full-Stack Projects

Bienes Raíces Manager – Property Sales & Management Platform

BienesRaicesManager

Technologies: PHP, MVC, MySQL, SCSS, Gulp, Vercel, AivenCloud, GitHub

- Engineered a real estate web platform structured around a custom MVC architecture and a dynamic router developed from scratch to handle HTTP requests and routing.
- Implemented the Active Record pattern for optimized CRUD transactions, integrating robust security controls including cryptographic password hashing and contact form sanitization.
- Built a responsive, multi-language UI (EN/ES) with Gulp/NPM pipelines and deployed a serverless build to Vercel linked to a remote AivenCloud database.

React & TypeScript Application Ecosystem

Portfolio

Technologies: React, TypeScript, Tailwind CSS, Zustand, Context API

- Built reactive Single-Page Applications (SPAs) featuring end-to-end strict typing, asynchronous form validation, and modular global state management using Zustand and Context API.
- Designed reusable custom hooks and optimized rendering performance and memory allocation utilizing memoization techniques (useMemo, useCallback).

Hackathon Competitions & Innovation

May 2024 – October 2025 | Leon, Gto.

Valle de la Mentefactura | NASA Space Apps Challenge

- Competed in regional and global technology innovation hackathons, collaborating in cross-functional teams to build MVPs under agile frameworks and reaching semifinalist status

Technical & Soft Skills

- Programming Languages: C#, TypeScript, JavaScript, Python, PHP, SQL (T-SQL), C, Java.
- Backend, Frontend & Architecture: ASP.NET Core, Clean Architecture, RESTful APIs, MVC Pattern, Entity Framework Core, Dapper, React, Tailwind CSS, HTML5, CSS3/SCSS, Responsive Design, State Management (Zustand, Context API).
- Databases, DevOps & Tools: SQL Server, MySQL, Docker, Git, GitHub, Command Line (CLI), Postman, Vercel, Scalar.
- Artificial Intelligence: Orchestration and integration of AI models and agentic workflows (APIs and local runtimes).
- Languages: English (Advanced / C1 - Conversational & Technical), Spanish (Native).
- Soft Skills: Cross-functional collaboration, assertive communication, adaptability, active listening, stress management.
